
CatOnium TPPBr

CatOnium TPPBr

Chemical Name: Tetraphenylphosphonium Bromide
CAS No.: 2751-90-8

Technical data

| | |
|---------------------|---------------------------------------|
| Appearance | White to off white crystalline powder |
| Assay | 99.0% - 101.0% |
| Water content ny KF | ≤ 0.5% |
| Loss on drying | ≤ 1.0% |
| Melting point: | 295 – 298 C° |

Application

Tetraphenylphosphonium Bromide Bromide (TPPBr) is a quaternary phosphonium salt mainly used in pharmaceuticals, as accelerator for fluoroelastomers, adhesion promoter for fluoroelastomers and curative of polyacrylate polymers which extends the shelf life of the compound and decreases the mould fouling. This material is highly soluble in water and slightly soluble in alcohols.

Packaging

Available packaging: 20 KG / 20 KG fiber drums
