

AminCat DBU

AminCat DBU

Chemical Name: 1,8-Diazabicyclo[5.4.0]undec-7-ene
CAS No.: 6674-22-2

General

AminCat DBU is a clear, light yellow liquid of relatively low volatility. It has only a slight ammonia-like odor, is miscible with water and is soluble in most organic solvents.

Technical data

| | |
|------------------|------------------------------|
| Appearance | Clear to straw yellow liquid |
| Assay | ≥99% |
| Water content | ≤0,50% |
| Flash point | 96°C |
| Specific gravity | 1.00 - 1.05 |
| Water solubility | Soluble |

Application

AminCat DBU catalyst is used mainly for specialized applications requiring very strong catalysis. These applications include formulations containing alicyclic or aliphatic isocyanates, which are much less active than aromatic isocyanates and require exceptionally strong catalysts. The product is recommended for evaluation in integral skin semi-flexible foams and microcellular systems.

Packaging

Available packaging: 200KG Steel Drums
